Editorial

Founded in 2000, MEDICALPS is a French world-class cluster dedicated to healthcare technologies. We are located in the heart of the French Alps, one of the most vibrant region in France regarding its economy, the number of research centers, healthcare facilities, and the number of high-technology industry leaders. This crossfertilized ecosystem with a prestigious history of scientific discoveries, clinical expertise and engineering innovations aims to shape the future of the healthcare experience.

MEDICALPS gathers over 100 members including world-class research centers, university and healthcare facilities, industry leaders and numerous startups. Our members develop and deploy preventive solutions, personalized therapeutics and home care monitoring systems to improve patient outcomes. Those smart medical solutions cover a diverse range of applications such as diagnostics, surgical robots, imaging, drug delivery systems, implants, connected devices, software, therapeutics and biotechnologies.

MEDICALPS is proud to promote the richness of its members through this member directory and to foster future partnerships.

ACTIVITY LAB

Medical technologies and e-health

Daniel
MERCIER

CEO

daniel.mercier@activitylab.com
www.activitylab.com

Founded in: 2015

1 to 10 employees

ACTIVITIES

ACTIVITY Lab

Activity Lab has created an innovative and patented technology for evaluating and improving fitness. Physical activity professionals use this technology with mobile apps, also developed by Activity Lab. This human-digital solution for improving health through fitness is called METs-Up. The METs-Up method, used by sport-health professionals, among other things in gyms and rehabilitation centers, is 4 times more effective than traditional methods, while being more appreciated by patients.

Activity Lab has just set up a sports-health ecosystem based on the MET-Up method. The sport-health ecosystem aims to respond to the new prescription sport-health market and will be mainly financed by the reimbursement of mutuels. Activity Lab's ambition is to make it a success in Grenoble, and then deploy it on a large scale. Too often the intensity of cardiovascular training is poorly defined because it is estimated based on heart rates and age. Too often the intensity of cardiovascular training is poorly defined because it is estimated based on heart rates and age.

ACTIVITIES

The Biomedical Instrumentation Department of AII S.A.S is dedicated to embedded systems for the acquisition and real-time processing of physiological signals. Its purpose is to provide tools for investigating and assisting therapeutic decision-making adapted to the needs of clinicians and researchers.

In this context, we propose CATARSI, an innovative medical device intended to improve the measurement of the arterial pressure by catheterization of the radial artery in the service of Anesthesia-Resuscitation and Intensive Care.

CATARSI is developed in close collaboration with clinicians (CHUG, APHP, HCL), and researchers (TIMC-IMAG PRETA team). It is supported by BPI France, the Rhône-Alpes region via FEDER funds, private investors and Business Angels.

CATARSI Project

Founded in: 1979

 51 to 100 employees

ACTIVITIES

Alma, a software publisher for hospitals and compounding pharmacies, is the specialist in the pharmaceutical preparations circuit.

Alma's Health division offers a comprehensive range of software products for the sterile and non-sterile preparations circuit, covering magistral and hospital preparations, chemotherapy, parental nutrition, analgesic intrathecal drips and neonatology and infant formula.

Alma's software products secure all processes related to the prescription, preparation, dispensing and administration of pharmaceutical preparations. They are used by many compounding pharmacies, as well as by a hundred hospitals in France, Switzerland, Belgium, Tunisia and Algeria.

MEDICALPS members directory

François
FAURE

CEO

contact@anatoscope.com
www.anatoscope.com

Founded in: 2015

 11 to 50 employees

- Winner of the digital innovation contest Orthopédie 2.0
- Publication in «Technique dentaire» n°3777 of 05/2018 with interview of François Faure

ACTIVITIES

For medical device companies who need to improve their personalized designs, Anatoscope offers software solutions to automatically transform imaging to complete 3D digital twins of the patients, ready for motion and physical simulation, to help diagnostics, to virtually try treatments, and to automatically design optimal braces and prosthetics.

Anatoscope offers web services to design personalized anatomy and devices based on imaging. This includes digital model reposing, and personalized CAD for various applications such as orthopedics, dental treatments and sport gear. The software is streamed in the web browser and requires no gears. Our customers fund the setup of the service, then we charge a fee for each design.

Nicolas
THIVANT

CEO

nicolas.thivant@araymond.com
www.araymond-life.com

Founded in: 2012

 11 to 50 employees

• Subsidiary of ARaymond

ACTIVITIES

ARaymondLife is a French pharmaceutical company with recognized expertise in plastic processing. Its know-how in thermoplastic injection and bi-injection molding allows it to design and produce parts suitable for both the human and veterinary health industries. Specialized in the manufacture of primary and secondary packaging, ARaymondLife is a real partner for innovation. The company offers its own RayDyLyo® pharmaceutical packaging range and is developing its CDMO activity for pharmaceutical laboratories, medical and cosmetic companies.

Organized in several 300m² workspaces dedicated to each type of product, the company has a new fleet of injection molding machines, both single and and bi-material in a controlled atmosphere. Injection, assembly and primary packaging are carried out in the ISO 5 class clean rooms.

The company is certified in accordance with NF EN ISO 13485: 2016 for the manufacture of medical devices.

Véronique
SCHOELLKOPF

Management Assistant

assistant.grenoble@astus-sa.com
www.astus-sa.com

Founded in: 2007

 1 to 10 employees

- Major prize at RuraliTIC 2012 - Triangle Alpin platform

ACTIVITIES

ASTUS SA provides a simple and effective wireless Tele-Medicine solution to remotely monitor patient health. The solution provides critical physiological measurements collected by the patient himself, an attendant, or a nurse.

Medical data are sent from a Set-top box, a Smartphone or a Tablet to a Secure File Server via a wireless transmission (WiFi, Cellular networks, Satellites). Doctors access the Secure File Server via a computer, a tablet or a smartphone. The doctor is instantly alerted if a value exceeds a threshold and is able to take immediate action, such as revising or sending prescriptions.

This e-Health equipment is well adapted to a variety of populations such as travellers, isolated elderly, hospitalized, residential care, and chronically ill patients at their homes needing regular monitoring.

Vincent
POHER

CEO

vincent.poher@avalun.com
www.avalun.com

Founded in: 2013

 11 to 50 employees

- ISO 13485 certified company for the design, production and marketing of IVD medical devices
- LabPad® pocket laboratory CE marked for healthcare professionals and patients
- Commercialization underway on the EMEA zone
- Close collaboration with the University Hospital of Grenoble in particular, for the realization of clinical trials
- Innovation on all care pathways, from biological measurement to patient care (example of CORINNE Digital Care Territory project)

ACTIVITIES

As a young innovative company, our ambition is to address one of the main challenges for tomorrow's medicine: to make available, here and now, the biological parameters that patients and healthcare professionals need.

Because we put patients first, we focus all our energy on developing our next-generation LabPad® POC testing device and its associated Tsmart® range of microcuvettes.

Today, our multidisciplinary team consists of 20 dedicated individuals providing their unique expertise and sharing the same passion for innovation and health care.

Driven by our quality system, our values are excellence, commitment, and responsibility.

Maxime
GOUGIS

Partnerships and Product Manager

maxime.gougis@baio-dx.com
www.baio-dx.com

Founded in: 2022

 11 to 50 employees

ACTIVITIES

baio-dx

BAIO-DX is a CEA and CNRS spin-off, it develops breakthrough solutions for clinical microbiology based on artificial intelligence. These solutions place BAIO-DX as a major player in digital microbiology. In addition to being simple and fast, these solutions are fully automated and can be perfectly integrated in all microbiology laboratories.

Combining lensless imaging for the acquisition of very high resolution images and artificial intelligence algorithms, our solutions allow the detection, orientation and identification of pathogens directly on a Petri dish as well as the production of classic and new generation antibiograms.

BIO COMPOSANTS MEDICAUX

Medical technologies and e-health

André
COLLOMBIN

General Manager

andre.collombin@biomedicaux.com
www.dental-fiber-force.com/fr

Founded in: 1994

 1 to 10 employees

- Number of products sold: 64 in own brand and 55 in white label
- Increase in turnover: -1% (2017-2018) and + 23% (2016-2017)
- Market: Germany, Europe, Canada, Middle East and Asia

ACTIVITIES

Since 1994, BCM designs and manufactures composite fiber products in Rhône-Alpes for the dental sector.

BCM invents pre-impregnated products and fiber posts for dentists and dental technicians.

MEDICALPS members directory

Anthony
BOYER

CEO & Co-Founder

anthony.boyer@blue-ortho.com
www.blue-ortho.com

Founded in: 2008

51 to 100 people

- 200 systems deployed in more than 15 countries
- 20,000 surgeries already performed

ACTIVITIES

Founded in 2008, BLUE ORTHO, a subsidiary of EXACTECH, develops and markets Augmented Surgery systems, or computer-assisted surgery for orthopedics. Our products allow the surgeon to better control during surgery the parameters of prosthesis placement in 3 dimensions and in real time, using sensors (www.exactechgps.com).

This field of technology is at the crossroads of several disciplines: mechanics, electronics, optics, computer science, mathematics, 3D geometry, computer vision, 3D visualization, virtual reality, man-machine interfaces and of course surgery.

With more than 60 employees, our company has experienced continuous growth since its creation.

Marc
JULIEN

COO

marc@diabeloop.fr
www.diabeloop.fr

Founded in: 2015

 101 to 250 employees

- Commercialization in 6 European countries - Submission for FDA approval (US) in progress
- International commercial partnerships (Roche, Terumo Corporation...)
- Several clinical trials planned in 2002
- More than 50 scientific publications and presentations

ACTIVITIES

Diabeloop is furthering scientific advances with interoperable self-learning algorithm solutions for diabetes management. Its devices enable automated insulin delivery, personalize treatment and reduce the mental burden on patients as well as improve their clinical outcomes. Our first solution for adult type 1 diabetes is already commercialized in Europe and we are working on plans to apply our technology to other types of treatments and populations to give people living with diabetes even more choices.

- InnovEIT Award - Nasdaq pitching session in Health Award

Stéphane
LAVALLEE

CEO

www.ecential-robotics.com

Founded in: 2009

 11 to 50 employees

ACTIVITIES

● ecential robotics

Founded by experienced computer-aided surgeons and engineers, supported by a panel of renowned surgeons, eCential Robotics offers a preoperative 3D imaging solution with integrated navigation system.

The eCential Robotics system consists of a fully integrated solution for 2D / 3D imaging and real-time surgical navigation, allowing surgeons to follow their actions directly within the 3D image of the patient. The challenge of this system is to facilitate access to Minimally Invasive Surgery by increasing the accuracy of the procedures and reducing the exposure of patients and staff to X-rays.

The eCential Robotics system will first be specialized in spinal surgery procedures. The eCential Robotics French imaging and navigation solution will offer the surgeon unparalleled precision, reliability and ease of use to date, and will significantly contribute to the development of ambulatory surgery.

ELECTRODUCER

www.electroducer.io

Founded in: 2017

 1 to 10 employees

- Inovizi grant
- French Tech Grant 2018
- I-Lab 2019

ACTIVITIES

Electroducer is a start-up developing devices to facilitate, secure and optimise percutaneous valves implantations (aortic, mitral, tricuspid) and complex coronary interventions. These multi-patented devices simplify interventions by shortening the procedures, decreasing costs, radiations and complications and increasing security.

The proof of concept has been published in a multi centric study and a randomized controlled trial demonstrating superiority of the Direct Wire Pacing technique. (Journal of American College of Cardiology Cardiovascular Interventions: DOI 10.1016/j.jcin.2019.09.029).

Animal stage has been completed and First In Man study is planned for S1 2020. The company have been founded Q1 2018 and leaded by worldwide famous Cardiologist and Businessmen with decades of Clinical, Research and Entrepreneur experience. This project brings together a lot of international KOL.

Electroducer develops a totally novel technology based on an innovative and proven technique which makes THV and complex PCI procedures Easier, Simpler and Safer.

 1 to 10 employees

The alliance represents

- 7 companies
- 12 production sites
- 4500 m² of clean room ISO7
- 900 employees
- 290 engineers and technicians in development

ACTIVITIES

JBT HubUp is a company and an alliance of leading entrepreneurs (Groupe JBT, Opia technologies, Sibaya BCPharMed, R&D-Technology, Eveon, Valotec et Progress Silicones) which offer the medical and pharmaceutical actors a unique solution for developing their medical device by gathering from day one all necessary skills and stakeholders which are needed to reach the objectives. From product ideation and concept to commercial production including related process development and qualification.

According to the project and the required skills, those companies can rely on the recognized experience of our talents, meaning in plastic injection and mold fabrication (Groupe JBT), in design, regulatory support and medical device filing (Opia Technologies), in industrialization expertise and project management (Sibaya BCPharMed), in design and fabrication of equipment and automatized production means (R&D-Technology), in conception and development of smart fluidic devices (EVEON), in conception and development of innovative active devices (Valotec) and in silicone and LSR injection (Progress Silicones).

KAYENTIS

Medical technologies and e-health

Véronique
DERIAT

HR Director

vderiat@kayentis.com
www.kayentis.com

Founded in: 2003

 101 to 250 employees

ACTIVITIES

Kayentis, a global expert in electronic data capture for patients in clinical trials, helps sponsors and CROs bring simplicity, efficiency and quality to the collection of clinical trial data from both patients and sites.

Kayentis has been involved in clinical development since 2003. Over the last ten years, it has specialized in electronic Clinical Outcome Assessment (eCOA) solutions for phases II/III in a broad range of therapeutic areas. It has conducted digital data collection for over 260 clinical trials in 79 countries (16,000 sites and 90,000 patients) and employing 120 different languages.

The company develops a full range of services and is now enlarging its eCOA solutions portfolio to support the post-COVID new normal and Decentralized Clinical Trials (enabling telehealth visits, and integration with other apps or external devices).

- 2017: Global Innovation Competition in the category «Individualized Medicine»
- Voted «Top 10 Medical Imaging Solution Providers 2018» by the US magazine Healthcare Tech Outlook
- KOELIS technology is covered by 8 international patents and supported by more than 70 international scientific and clinical publications. Today, 300 customers around the world benefit from this technology, including 80 in France.

ACTIVITIES

KOELIS, The Prostate Care Company, has assisted urologists and radiologists from around the world in their routine clinical practice since 2006, providing the latest technology for personalized prostate cancer planning and management, from biopsy to active surveillance and treatment.

Focused on developing advanced, targeted and less invasive solutions, KOELIS is committed to creating and bringing to the market a new paradigm in prostate cancer care.

KOELIS looks for becoming an international model in the prostate cancer sector with targeted diagnosis and treatment.

Paul
KAUFFMANN

CEO

paul.kauffmann@magia-diagnostics.com
www.magia-diagnostics.com

Founded in: 2017

 11 to 50 employees

- 2017: i-Lab challenge award by the French Ministry of Higher Education, Research and Innovation
- 2018: Featured in the 100 best French start-ups by the magazine Challenges
- 2018: i-Nov challenge award (Future investment programs)
- 2019: Auvergne-Rhône Alpes PIA Region award for MagIA diagnostic's R&D and pre-industrialization efforts

ACTIVITIES

MagIA diagnostics develops a portable mini-laboratory performing multi-parameter panel analysis from finger-pricked blood samples. Our system allows for the parallel detection of up to 6 pathogens in only 15 minutes. The technology emerged from a unique expertise in micro-magnetism applied to biology, originating from 15 years of research at the French National Centre for Scientific Research (CNRS).

Our solution is driven by the motto "test more to treat more". MagIA diagnostics aims to make a major contribution to improve medical screening approaches: The portability and speed of the system allows it to be used as close as possible to the populations to be screened. Furthermore, the system is as affordable as a serological analysis in a medical laboratory.

OSE -SAS: Subcontractor Electronic card and electronic assembly maker since 1985. We are an E.M.S, leader of manufacturing "Made in France" in the "AURA" region— ISO 13485 on the electronics industry market, we are marketing finished products, medium and large scales.

The company OSE, located in Corps, Isère (38), is specialized in Wiring and Integration of Electronic Cards.

We have developed a corporate culture, developing the know-how of our employees in order to achieve a common goal: Customer Satisfaction. Our SME of 100 people is installed in a building of 4200 m² and masters all the Manufacturing Processes.

We provide an ISO 9001 2015 ISO 13485 2016 system that demonstrates an organization that allows us to secure and to ensure the reliability of practices at all levels of production: Compliance with the criteria of IPC A610 Class 2 and Class 3/ inspection by AOI 3D/ Visual inspection on 100% of the boards by certified technicians IPCA 610/ X-ray inspection (BGA, QFN).

Building on our dynamic investment policy, we want to offer our customers traceability for each card in compliance with regulations, using state-of-the-art technologies.

PELICAN HEALTH

Medical technologies and e-health

Thomas
SORANZO

CEO

tsoranzo@pelican-health.com
www.pelican-health.com

Founded in: 2020

 1 to 10 employees

ACTIVITIES

Pelican Health is a precision medicine company.

The company offers solutions for studying the intestinal microbiome and using it for diagnostic purposes. The study and exploitation of the intestinal microbiome, i.e. all the microorganisms that inhabit our gut, promises to revolutionize precision medicine.

However, access to the intestinal microbiome is currently done by complex, invasive, expensive or non-representative methods. Pelican Health proposes a non-invasive, easy-to-use, affordable and widely deployable solution. It comes in the form of a class IIa medical device the size of a pharmaceutical pill.

Pierre-Alexis
POULET

Business Development Manager

pa.poulet@pixyl.io
www.pixylmedical.com

Founded in: 2015

 1 to 10 employees

- BPI Emergence Prize 2014
- Winner NETVA 2016
- GE most promising start up award 2017
- Software used in several clinical trials, or clinical research projects in EU and USA
- 4 publications presenting results related to the use of the software
- Software used in 11 clinical trials

ACTIVITIES

Pixyl software is used in research and clinical routine to simplify brain MRI analysis, detecting automatically imaging biomarkers. Its results are fully reproducible and simplify the task of experts (neurologists and neuroradiologists).

Our algorithms can be used to detect abnormalities and measure brain volumes on MRI. Pixyl technology is applied to various pathologies, including multiple sclerosis, stroke, head injuries, and neurodegenerative diseases (Alzheimer's, Parkinson's, etc.)

 11 to 50 employees

- 2021 : Remedee Labs join Future4care, a digital health startup accelerator founded by Sanofi, Capgemini, Generali, and Orange
- 2021: Effectiveness clinical trials started in arthritis, migraine pain and fibromyalgia
- 2020: Remedee Labs join the the world's largest accelerator for medical device companies. "Medtech Innovator"
- 2019: Remedee Labs raises €11 million to accelerate clinical efficacy trials of its solution.
- 2019: ISO 13485 certification obtained

ACTIVITIES

1.5 billion people worldwide suffer from chronic pain and over half of them are not satisfied with their care. Remedee Labs aims to give these patients a new life.

After 10 years of pre-clinical and clinical research, Remedee Labs has developed the first integrated and personalized solution based on millimeter wave therapy to tackle chronic pain. Developed around its endorphin stimulator associated with the first patient-centered digital service platform (personal coaching, peer support...), the Remedee solution helps patients to take back control of their life on a sustainable way.

Remedee Labs was founded in 2016 in Grenoble, France, by three experts in the areas micro and nano medical technologies and biomedical research. The company now has a multidisciplinary, international team of over 35 people.

- Our values: Integrity, courage and passion

ACTIVITIES

RocheDiabetes

Roche Diabetes Care is a healthcare company specialized in diabetes. For more than 40 years, it has been designing solutions to meet the needs of patients and healthcare professionals: medical devices (glucometers, test strips, lancing devices, insulin pumps), digital solutions (apps, platform for sharing glycemic data) and services (documentation etc.).

Thanks to its integrated ecosystem connecting medical devices and digital solutions, Roche Diabetes Care is paving the way for personalized diabetes management with the ambition to bring true relief to patients and to facilitate the management of this complex disease.

Roche Diabetes Care France is an affiliate of Roche Group in France, alongside Roche SAS and Roche Diagnostics France. For more information, please visit www.roche.fr. It is located in Montbonnot-Saint-Martin.

One of french leaders in in vitro diagnostics, ROCHE DIAGNOSTICS France markets and distributes a complete range of innovative products and services in Medical Biology (chemistry, immunology, molecular biology, point of care testing, coagulation), Tissue Diagnostics, Diabetes Care, as well as Sequencing Solutions.

Since the 1st of January 2013, ROCHE DIAGNOSTICS France ensures the management of the Maghreb, African Sub-Saharan countries and Luxembourg.

Pascal
BENASSI

General Manager

pascal.benassi@scaljet.com
www.scaljet.com

Founded in: 2015

 1 to 10 employees

ACTIVITIES

SCALJET is a French Medtech start-up whose mission is to reduce post-traumatic effects by developing a minimally invasive and non-traumatic solution for minimally invasive surgery.

SCALJET has developed a brand new medical device, the 1st ever designed "Aero-Hydro" dissector, which can be either used as a Hydraulic dissector and also used as a Hydraulic scalpel.

This technology consists in the creation of a "Blowing effect" produced by two extremely thin convergent hydraulic micro-jets. The convergence of these jets generates a fan of fluid and air which lifts the elements surrounding the organs, thus allowing an easier identification and a non invasive dissection of the organ itself without any damage to the arteries, veins and less bleeding.

ACTIVITIES

UroMems was founded in 2011 and focuses on designing, developing and commercializing active implantable medical devices.

The company is based at the heart of the French Alps, in the city of Grenoble, representing one of the most dynamic French area in the Medtechs industry.

UroMems is highly innovative and focuses on clearly identified clinical unmet needs, not only for their prevalence but also for their negative impact on patient's quality of life.

Since the inception of the company, significant investments have been made for the development of the UroMems' first product. This includes a € 12 million series A financing round led by Wellington Partners, Munich, Germany, Bpifrance via FABS Fund, Cita Investissement, Supernova Invest and b-to-v Partners AG.

Bernard
GREILLIER

Founder & CEO

bernardg@veinsound.com

Founded in: 2017

 1 to 10 employees

ACTIVITIES

A revolution on how to treat varicose vein : ULTRASOUND.
Everybody knows the virtues and advantages of the diagnostic ultrasound, but nobody knows their advantages in terms of therapy in this field. Fortunately, we are lucky and thankful to this ultrasound device that can treat varicose veins using this non invasive method, and without intrusion to the patient's body.

Through the support of medical and ultrasound team experts, the VEINSOUND company in partnership with LABTAU (National medical research institute INSERM) had developed this equipment and endorsed it to the market.

This treatment is simply the same as an echography, that does not need surgery, injection, and it is painless, scarless, and doesn't need to file a sick leave. Through this innovations and experiments, it had been a big impact to the humane life to have an ease, better and quality of life improvement.

- 2016-2019 - Maturation and Incubation at SATT Linksium

ACTIVITIES

AIOVA is an emerging biotech company focusing on the development of innovative DNA vaccines to fight against emergent or re-emergent infectious diseases such as HIV (causing AIDS), Influenza (Flu) and right now against the SARS-CoV-2 and its variants (COVID). Such infectious diseases are threatening the human and animal lives by causing regularly global and deadly pandemics. Numbers of these viral pandemics are expected to increase because of massive urbanization and environmental degradation resulting from climate change.

AIOVA develops the next generation of DNA vaccines to promptly, effectively, and sustainably tackle these emergent and re-emergent infectious diseases. AIOVA owns a patented eDNA platform with intrinsic and unique properties conferring augmented immunity and protection compared to other vaccine platforms (including other DNA vaccines). Injecting the DNA vaccine in the host induces a safe, protective, strong and long-lasting immunity (several years) as well as a protection against the original virus and its variants (so-called pan or universal vaccines). Moreover, DNA vaccines are easy and fast to design and manufacture, with reduced costs, ensuring high profitability.

AIOVA's business model is based both on the licensing of rights on products resulting from its R&D, and on strategic partnerships with pharmaceutical industrials.

Founded in: 1932

 11 to 50 employees

- Laureate of « Réseau Entreprendre Isère »
- Trophy of local Chamber of Commerce: development and commercial strategy
- Investment of 10% of turnover in R&D on a continuous basis since 2013
- ISO 9001 - 2015
- 25% of the activities dedicated to the export

ACTIVITIES

For over 40 years, ASTRA has been specialised in cutting edge technology, particularly adapted to orthopaedics, personal safety, paramedical and many other industrial sectors.

High frequency welding, welding-cutting for welding-cutting. The use of films such as PVC, PU, EVA or some PA, associated or not with technical textiles enable us to make quality products while minimizing the need for sewing. High Frequency welding is suitable for the assembly of various complex products such as Velcro on PVC or PU straps for orthopedic corsets or for decoration by embossing.

Cutting flexible materials using a cutter or automatic cutting machine and Laser cutting (depending on the amount and type of coated or uncoated fabric).

Founded in: 2013

 1 to 10 employees

ACTIVITIES

Training and Consulting in Medical Device.

IFIS group, leader for vocational and professional training in Healthcare Industries (France).

Pascal
PIZELLE

CEO

pascal.pizelle@ixiade.com
www.ixiade.com

Founded in: 2005

 1 to 10 employees

- More than 600 innovation projects supported since 1999
- 10 projects rewarded with a design & innovation award
- An international and multidisciplinary team
- Missions admissible to Research and Innovation tax refund

ACTIVITIES

Ixiade is a strategy, market research and design agency. Its innovation approach is based on the belief that the user experience is key to the success of innovation projects in increasingly competitive markets. From the first ideas to the market, it relies on a multidisciplinary approach involving, at each stage, the user (strategy, design-thinking, creativity, co-design, concept generation, in-situ testing, uses & usage studies, design).

Ixiade conceives and implements a wide range of techniques, methods & tools to:

- Explore existing uses, users pain points and anticipate the future
- Imagine illustrated & communicating innovative concepts of products, services and HMI
- Experiment with B2B & B2C potential users to test the interest, acceptance and market potential
- Sketch, prototype and test the innovation ergonomics and its diffusion

Ixiade also shares its know-how and best practices through tailor-made workshops and trainings in order to meet the needs of innovation projects effective management centered on human factor.

LCIE Bureau Veritas

Supporting Partners

Stéphane
RANCHON

Sales Manager

stephane.ranchon@bureauveritas.com
www.lcie.fr

Founded in: 1882

 11 to 50 employees

- Local player with an international network (Bureau Veritas group - 78,000 people worldwide, 1,500 laboratories and offices in 140 countries)
- COFRAC / ILAC accreditation
- International recognition: Tests according to FCC, UL, CSA standards
- Worldwide acceptance of our testing reports : USA, Canada, Japan, Korea, Brazil and in 50 other countries

ACTIVITIES

LCIE is made up of 6 laboratories, two of which are specialized in testing for Medical Devices: one is based in Moirans near GRENOBLE (38) and the other in Fontenay aux Roses – PARIS area(92).

Our main activities (in Moirans):

- > SAFETY tests (In accordance with IEC/EN 60601-1, 60601-2-xx standards), EMC tests, RF tests (Wifi, Bluetooth, LoRa, NFC technologies, etc.), mechanical and climatic tests, REACH and ROHS tests
- > Experts in medical devices for support to manufacturer in the development of new devices (construction analysis – safety and EMC, regulatory analysis for international sales, etc.)
- > International certification in the fields of RF, EMC and safety: support from the preliminary evaluation until the final registration of your product with the local authorities.
- > Cybersecurity specialists according to UL2900, IMDRF or MDCG – Training on: standards, risk analysis (EBIOS method in particular), Threat Modeling approach
- > Eco-design expert center (IEC 60601-1-9)

Our Strengths :

- > EMC, SAFETY, RF, CYBER and eco-design tests on the same site and a single sales contact point in Moirans
- > Tests under COFRAC/ILAC accreditation in Moirans,
- > International acceptance of our CB tests (54 countries)
